

Function:
SeperateWords

Open the text
document to be typed
in read

find length of txt file
(number of
characters)

For the
number of
characters in
txt file

not finished

if char = space

Yes

$x = 1$ and $y = y + 1$

No

Save char to position
 x in
 $\text{WordContents}(x, y)$
(word contents is a
dynamic array)

$x = x + 1$

Return
 $\text{WordContents}()$

This Function separates all words into an easy to
read array with different letters of each word in their
own column and each word in its own row

t	h	e		
q	u	i	c	k
b	r	o	w	n
f	o	x
